Dear Mr. Wong

I am a year 2 computing science undergrade at Singapore Institute of Technology, currently looking for a summer internship and I saw your company's job posting for a Full Stack Software Engineer intern on JobsDB.com. As a undergrade in his penultimate year, I feel that I would be a good fit for this position.

From the job requirements, you are searching for a candidate with experience in frontend development and backend API. I meet the necessary requirements as I have done a couple web applications during my 2 years in computing science, having build the web applications with HTML, CSS, Vue and React for the frontend while using C#, python and flask for the backend. I have also done projects on machine learning with libraries like Tensorflow, Keras, Numpy and Pandas to train and classify motion data.

I believe that I will be a great addition to your team as I am able to support your team in frontend development, machine learning and other aspects of developing your product. Furthermore, I have experience working with small teams of engineers and developers like the team you have in Singapore. I am also experienced in agile software development which will be helpful when It comes to managing a software development lifecycle.

You can reach me by my email at glendonkyj@gmail.com or my phone number, 92356368. Thank you for your time and I hope to receive a reply soon.

Sincerely,

Glendon Keh
